

Architecture - a process of designing buildings

Architect - someone who designs buildings

Column – an upright support, sometimes cylinder, which holds up the roof or the front of a building

Decoration - added to make the building look attractive

Design - process of developing ideas

Detail - a small piece of a whole

Elevation view– the front, back and side view of a building

Function – use or purpose

Front elevation - the front view of a building

Material – what something is made out of

Plan view– similar to a birds eye view looking down into the building

Scale – the size of one thing compared to another

Section view - a cross-section, like a slice through a cake or the building

Texture - the feel of a surface

Three-dimensional - not flat, but with height, width and depth
